

FEBRUARY NEWSLETTER

Ad-Tek's Busy Calibration Season ... in Full Effect!

At Ad-Tek, Inc., we strive to provide the highest level of service during your scheduled calibrations. However, due to various factors, **scheduling remains fluid**, and we may need to adjust your scheduled calibrations, sometimes at the last minute.

Once our technicians are on their service loops, their schedules are dictated by the needs of each customer. When we arrive at a lab, we often encounter discrepancies between the expected and actual equipment lists, as well as unforeseen repairs that **require additional time**. Our commitment is to ensure every customer receives thorough and complete service, meaning we do not leave a lab until all calibrations are completed.

Rest assured, when it's your turn, we will provide you with the same dedicated attention and service excellence. We appreciate your understanding and flexibility as we work to maintain the highest standards in calibration.

Thank you for choosing Ad-Tek, Inc.

Is Your Equipment List Current?

Maintaining an accurate and up-to-date equipment list is essential for a smooth and efficient calibration process. When our technicians arrive on-site, having the correct equipment details ensures we can allocate the right amount of time, resources, and tools needed to complete your calibrations and any necessary repairs.

- ~ Feb. 9 is the Super Bowl
- ~ Feb. 17 is President's Day

CAPPING COMPOUND: Many labs have standing orders with us for Grey Iron Capping Compound, yet unfortunately we still do not have an answer from the manufacturer of when it will become available. Until then, we are recommending **Vitrobond Ingot Capping Compound**, or ask about our **UTEST Concrete Cylinder Grinders**, both in-stock now and ready to ship from Boring, OR.

Remember, we typically schedule on-site calibrations 2 months in advance.
